

Boyd Visuals is committed to being an environmentally responsible business and making sustainable choices.

From selecting product materials to shipping, to product end life we are always asking how we can do better for our planet?

New ways we are making a difference in 2021

Recyclable wall-mounted whiteboards

We are always looking for ways to be environmentally responsible and conscious of our products lifecycles. We don't want our whiteboards ending up in a landfill, so we are committed to preventing waste and we ask our customers to support us on this mission to do better for our planet.

When you are finished with a whiteboard, instead of throwing it away send it back to us and we will recycle it for you. Our team will break down the boards and make sure all components are recycled.

This program is free for Boyd Visuals wall-hanging whiteboards.

This is just the beginning of Boyd Visuals reducing rubbish and keeping Aotearoa beautiful.

Ways we are continuing to make a difference:

Products made from recycled materials...

- Products in our Acoustic range are made from 60% min recycled PET. Plastic from PET drink bottles is broken down and then fluffed, stretched, weaved, needled, heated and cut to make our panels.
- Our Sustainable Deflecto products are made from 60% min recycled plastics, (audited each year to maintain this standard) with plans to launch more products in this range in 2021
- The Boyd Visuals Environment Committee has implemented a compost project to break down our organic food scraps to reuse as fertiliser. Each kitchen has a compost bin we all take turns to empty and maintain our compost bin.

To see big change it can often require small sustainable steps so the change lasts. We are a responsible and innovative business dedicated to making a difference and we will continue to develop new ways to make lasting change.
